University of California, Berkeley GPA: 3.42/4

August 2022 - May 2026

B.S. Electrical Engineering and Computer Science

Relevant Coursework: Structure and Interpretation of Computer Programs, Data Structures and Algorithms, Designing Information Devices and Systems I & II, Computer Security, Machine Structures, Efficient Algorithms and Intractable Problems, Discrete Math and Probability, Blockchain for Developers

TECHNICAL SKILLS

Tech: Back end Development (Node.js, **Next.js**, Express, Django, **Spring**, **REST APIs**), DataBases (**MongoDB**, DynamoDB, PostgreSQL), Front end Development (**React**, Angular, **Chakra UI**, **HTML/CSS**), Machine Learning (**LLMs**, Regression, Clustering), **Docker**, Kubernetes, Version Control (**Git**), Testing (**Postman**, **JUnit**, Developer Tools), Data Science (Numpy, **JupyterHub**), Terminal, XCode, **VS Code**

Services/APIs: Leaflet.js, **OpenAI**, **Google Cloud**, AWS, ARKit, Twilio, **Firebase**

Languages: **Java**, **Python**, **JavaScript**, **TypeScript**, C, SQL, C++, Flutter, Dart, Swift

EXPERIENCE

Software Engineering Intern

June 2024 - Present

Yoda Labs

- Contributed to a service with audio recording, using Python, Supabase, and React on Render supporting over 900 users.
- Implemented a RESTful API using Django and secured data transactions with role-based access controls.
- Used Whisperer/GPT-3.5 for transcription and analysis of audio files, reducing manual processing time by over 50%

Software Engineering Intern - Student Contract

January 2024 - May 2024

Gitty, Inc

- Created 7 site pages using React for hiring platform connecting Managers and Recruiters within Next.js framework.
- Integrated a Job Posting ChatBot using AWS Lex, facilitating the creation of unlimited job postings.
- Led API development to capture chatbot inputs for job postings stored in DynamoDB database; conducted comprehensive testing of API endpoints with Postman to validate data accuracy.
- Contributed to a team that developed an AI-driven matching algorithm, which improved hiring accuracy over 18%.
- Implemented WebSockets to replace HTTP requests for real-time data synchronization for the chatbot data storage.

Software Engineering Intern

May 2023 - August 2023

Geopogo

- Collaborated with the design team to integrate user feedback into development, leading to a 1.7-star increase in user ratings.
- Helped develop and prototype a new feature, tags, using ARKit/Swift to allow users to save and continue projects.
- Utilized AWS Amplify and Amazon Cognito for authentication and managed data storage using Aurora RDS.
- Developed API endpoints for 'tags', serving as bookmarks for users to save AR designs efficiently.

PROJECTS & EXTRACURRICULARS

SafeZone

- Full-stack CRUD web application to compile Berkeley's Warn Me system of over 10,000 incidents into a map-based interface running on Spring using Java, JavaScript, Bootstrap, and MongoDB.
- Used OpenAI's GPT-3 with Google Geolocation API to process user queries into search terms for an incident database.
- Integrated Docker to orchestrate container management, enhancing scalability, and deployed via AWS cloud services.

Video Convolution Processor

- Optimized 2D convolutions for video processing using SIMD, OpenMP, and Open MPI to achieve significant speedups.
- Developed a convolution framework, enhancing performance through algorithmic optimizations and parallel processing.

Web Development at Berkeley (Counselor, Full-Stack Developer)

- Worked on full-stack applications for industry clients (prev. clients Gitty Inc, Convex, Formula Electric @ Berkeley)

JPMorgan Chase Software Engineering Virtual Experience

- Developed financial software solutions by implementing transaction processing algorithms/ creating data visualization dashboards
